

Our Interactive Displays help marketers and educators reach their audience.

Interactive Displays & Kiosks

Convergence.net is a premier provider of Interactive Displays and Kiosks. Our Interactive Display Platform help bring your sales and marketing message to important places where your targeted audience gathers. Whether you reach your consumers in a real estate sales office, airport, resort lobby, or zoo or museum exhibit, our Interactive Displays can help deliver your marketing or educational message.

Our Interactive Displays use a combination of flash animation, widescreen movie playback, graphics, and the latest flat panel display and touchscreen technologies. We are experts in integrating your message in one large touchscreen display as well as multi-display kiosks integrating additional displays for associated site maps, product or accent images, and kiosk navigation. Our web and database experts support custom integration with online or back office applications.

The Convergence.net team will work with your creative team or our creative team will provide complete storyboard, animation, graphics, and video compression services as required. Clients may select from our standard kiosk configurations or we will define custom kiosk controllers as required.

Interactive Elements:

Movie Area

Play back a different widescreen MPEG-4 (h.264) for each button which is pressed. Ideal for showcasing different aspects of a company, product, project, or educational exhibit.

Navigation

Up to ten buttons are contained in the main navigation area for viewers to select among presentation features. Each button selection results in a unique set of movie, accent image, site map, and messaging.

Message Area

Animated marketing messages are shown in this area to highlight key points of the selected feature.

Title / Image Area

After each button selection, a new subject title is shown with animation in this area. This animation typically concludes with a image which is associated with the movie clip being played.

Site Map Area

This area graphically shows a map with highlights associated with the feature currently selected. The highlights and/or map may change with different button selections.

Convergence.net's marketing and educational displays are ideal for these applications
